Description

Hi,

I added some custom CSS to slublog.org in order to remove the left sidebar. (I did this in "Edit CSS".) When I did it, it somehow broke the menu colors, bringing #24890d from the original theme.

The hover background color **should** be #2264A1 for submenu items and #0f4b7f for top level menu items. The text hover color should be #ef483e. Sorry to trouble you with something like this — I just can't seem to figure out how to get the colors back as they were before.

Thanks so much.

I'm not 100% sure I'm looking at the right place, but when I inspect in Chromium I'm seeing the intended colors, as you've described them. See screenshot.

Hmm you're right — everything now looks normal. Thanks for checking!

Must've been a browser cache issue or something. Thanks for reporting back!
