Description	
In #13296 I enqueued jquery-migrate on bp-nelo, so that we didn't experience unexpected breakage after the WP 5.5 upgrade.	
In advance of WP 5.6, where the default jQuery will be updated to the latest version, we should preemptively update bp-nelo's jQuery to the latest. Let's use this ticket to track the necessary changes.

I spent a good deal of time trying to sort out bp-nelo and the plugins that we run on the main site. The rabbit hole is deep here: cac-advanced-profiles, for example, uses a library (jquery-waypoints) that has since been updated for the latest jQuery, but this update included major changes to the API. There are other cases like this. I'm going to keep working on it during the 1.19 cycle. In the meantime, if we see a WP update that changes the default version of jQuery, we'll ensure that the migrate tools are available.

Let's get to a workable solution for the WP 5.6 upgrade, scheduled for late February.

Bumping this to March for further consideration.

I've finished much of the necessary work on this (see <https://github.com/cuny-academic-commons/cac/commits/wp56>) but I need to push this out at the same time as the broader #13343.

In the [following commit](#), we switched from the jQuery Cookie plugin to js-cookie. This broke the bp_get_cookies() function call used in bp-nelo. See [#14129](#).

I've just updated the bp_get_cookies() function so it uses the js-cookie logic and applied the fix to production:

Thanks, Ray, and sorry for botching that part of the migration :-/
