Description From Zendesk: One of our excellent KBCC biologists has made an amazing OER lab manual on WebflowIO, and we were wondering if you have any thoughts on how to migrate it over to the Commons (because the commons is free and awesome, we think this might be a good longer-term solution). The lab manual is available here: https://bio-33-lab-manual.webflow.io/ Professor McGovern has already done the alt-text and accessibility for all of the pages, so if we can somehow magically import rather than copy and paste the text, that would be preferable. Any resources or suggestions on how to best proceed would be most appreciated!

- Description updated

It may be possible for me to import it. In order for that to happen, I'd need to see what the webflow.io export files look like. See <https://university.webflow.com/lesson/code-export>

My guess is that we will not be able to import the broad look and feel of the webflow.io site - things like typography, colors, etc that are handled by WP themes - but that I might be able to run an import on the content (HTML, images, etc).

Could I get a member of the KBCC team to generate an export for me?

- Status changed from New to Abandoned

Closing due to inactivity. I've added Ray as a watcher in case the reporter comes back with the request - Ray has written tools for parsing this sort of export, and may have some insight into paths forward.
