Fixed in <https://github.com/cuny-academic-commons/cac/commit/b67d5f28b0bb24aba169e8987f9d5144906aa447>.

Deployed as a hotfix.

Boone, I also noticed that there is another tapor-client submodule in the root. Is this intentional?

Thanks, Ray! I probably had previously deployed the change, but it was overwritten when I did another git submodule update. Possibly this is linked to the extra submodule, which was likely a stupid setup error on my part. Cleaned up in
