I'm going to start a topic on Basecamp about this because I need some help from André and because there are some larger issues that it raises that are best settled in a group.

I'm assuming this was a one-time thing, as no further problems have come up since the move to the new server.

Did we ever re-add those plugins? If not, let's assign this to me and I can do it.

I never readded anything.

We shouldn't just re-add plugins that weren't being used. What are PodPress and WP-SpamFree? Do we need them? What is Boone's site-wide tag plugin?

Well, I think Joe's point was that he wanted to use PodPress. But he doesn't seem to be missing it, so let's close this ticket and reopen if need be.
