Description			
Hi Boone,			
I think I just viewed cdev without logging in; opened a chrome incognito browser window to confirm, and found the same thing.

I believe that cdev used to be locked at the global Apache level, but André probably lifted that restriction so that we could figure out some of the JITP stuff a few weeks back.

For the time being, I have reenabled the .htpasswd restriction in .htaccess. But this is problematic in the long run, because we keep .htaccess under version control, and I don't want to extend that authorization requirement to all instances of the Commons. André, for that reason, could I ask you to move the auth block (the first four lines of /var/www/html/.htaccess on cdev) to our vhost definition, so that I can revert .htaccess to the repo version? Thanks.

#2 - 2012-04-24 10:22 AM - local admin

Boone, would it be acceptable for you to use the technique we worked on before where only a single subdomain (cdev.gc.cuny.edu in this case) would be protected? In this case it could still have the snippet in repo control and not affect the production site.

```
AuthType Basic
AuthName "Restricted Access"
AuthUserFile /var/www/.htpasswd
Require valid-user

SetEnvIf Host ^cdev2\.gc\.cuny\.edu challenge_me
SetEnvIf Remote_Addr 127\.0\.0\.1 internal_request

satisfy any
Order Allow,Deny
Allow from all
Allow from internal_request
Deny from env=challenge_me
```

#4 - 2012-04-24 10:25 AM - Boone Gorges

- Status changed from Reporter Feedback to Assigned

Sure, that sounds fine to me, André. I'd do it myself, but vim is telling me you've got the file open :)

#5 - 2012-04-24 10:35 AM - local admin

Sorry, it's all yours now :)

#6 - 2012-04-24 01:53 PM - Boone Gorges

- Target version changed from 1.3.13 to Not tracked

Bodacious. Fixed in <https://github.com/castiron/cac/commit/85427867232cafee8917a523c106dfd9867f871e>

Thanks, André.

Thanks, André.

You're welcome. Thanks for running with it.
