<b>Description</b>			
Just visited the Commons as a non-logged in user and found that the Featured content box on the homepage didn't render until I logged in. Can you try to replicate the error? I'm on Mac OS X, Chrome.

By the way, the non-logged in screenshot shows me as logged in because I opened an "incognito" browser window to create it while remaining logged in through another browser window.

- Status changed from Assigned to Reporter Feedback

It appears that the group you've selected to feature is a Hidden group. The plugin has safeguards built in to prevent this content from being featured.
