Description			
<p>We are migrating sciencestudies.gc.cuny.edu to the commons, currently hosted on the GC's old web.gc.cuny.edu server, and I made the mistake of adding a domain mapping (through the commons admin page for the site) to sciencestudies.gc.cuny.edu. The problem is that old site that was hosted at web.gc.cuny.edu was removed and they added a redirect to gcsciencestudies.commons.gc.cuny.edu, resulting in a redirect loop.</p> <p>Can someone with superadmin privileges delete the domain mapping that I added on the gcsciencestudies site?</p>
