

## CUNY Academic Commons - Bug #2531

### mellontheme submodule not pulling in its submodules

2013-04-02 04:00 PM - Keith Miyake

<b>Status:</b>	Resolved	<b>Start date:</b>	2013-04-02
<b>Priority name:</b>	Immediate	<b>Due date:</b>

<b>Target version:</b>	Not tracked		
<b>Description</b>			
I have a submodule dependency in the theme that needs to get added/initialized recursively from my my theme. The way it's currently included as a commons submodule leaves my submodule directory empty.			
see: <a href="http://stackoverflow.com/questions/1535524/git-submodule-inside-of-a-submodule">http://stackoverflow.com/questions/1535524/git-submodule-inside-of-a-submodule</a>			
Right now my sites are not accessible because I have php requires on the submodule in my theme.

Sorry about that, Keith. I've done a recursive update. Please check again.

- Status changed from Reporter Feedback to Resolved

Yeah, some sort of failsafe check is probably a smart idea, especially if you're just using the external lib for secondary stuff (sanitization, saving settings, etc).

But this one's my fault :) You're our first guinea pig with the submodule setup. We just have to get the workflow down. Thanks for your patience.
