

CUNY Academic Commons - Bug #278

Group Blog plugin creates subdirectory, not subdomain blogs

Target version:	1.0.1		
Description			
I jnoticed something weird while looking at the group blog interface for a new group that I'm a part of: when I enabled a group blog and selected the option to create a new one, it said that the blog created would have a URL with a subdirectory instead of a subdomain. screenshot attached.
