- Status changed from New to Resolved
- Target version set to 1.5.8

Thanks for the report. This is being caused by a change in WordPress 3.7, which is causing some problems with our custom login form in the admin bar. See <https://buddypress.trac.wordpress.org/ticket/5219> for a description of the issue, and a similar solution as applied to BuddyPress.

Fixed in <https://github.com/castiron/cac/commit/9defa3c0554def8a29f1194e3f43df0f1b8e7bed>. The change will go live with our next update.
