<b>Description</b>			
I've noticed long page hangs on the send invites tabs of commons groups. Any way to troubleshoot that?

It happens because that page contains a list of checkboxes that includes every member on the site. So it's only going to get worse.

I suggest removing the checkbox list altogether. It's of limited utility anyway, given the large number of items in the list. Users should instead rely on the autocomplete function.

To be honest, I think we have to. I was demoing the Commons for someone the other day and the browser hung so long I had to force quit. Let's do autocomplete and perhaps add a small note of explanation, inside the text box -- something like -- "Start typing a member's name" (feel free to suggest other, better directions)
