WPMU Domain Mapping Debugging on cdev

2014-12-02 12:23 PM - Raymond Hoh

Status:	New	Start date:	2014-12-02
Priority name:	Normal	Due date:

Category name:	WordPress Plugins	Estimated time:	0.00 hour
Target version:	Future release		

Description

As per the 1.7.5 release, there was a redirect issue with the WPMU Domain Mapping plugin during upgrade to v0.5.5 that forced us to rollback to the previous version (v0.5.4.3).

Boone has suggested that we help debug the latest release on cdev so we can send a patch back to the authors.

Can you let us know when you've set up a domain for mapping on cdev and whether you require any help in debugging?

Thanks!

Thanks, Ray. Who is the "you" here? Did you mean to add members of the team as watchers on this ticket?

Who is the "you" here?

Oops! Sorry for the confusion. Meant to write:

Boone - Can you let us know when you've set up a domain for mapping on cdev and whether you require any help in debugging?

#3 - 2014-12-02 02:19 PM - Boone Gorges

- Assignee changed from Boone Gorges to Matt Gold

I've realized that this won't work without a small amount of configuration by IT. Matt, can you please submit a request for IT to allow boonegorges.net to be mapped to **cdev**? That is - whatever config change they generally make for mapped domains, same thing here, but on cdev. Thanks.

Request made

#5 - 2014-12-12 09:04 AM - Boone Gorges

- Target version changed from 1.7.6 to Future release

We've hit a hurdle at IT, so I'm moving this out of the milestone until we get a response.
