### Description

A couple tasks I perform regularly that should be automated:

- Minor plugin updates (all  $x.y.z \rightarrow x.y.z+1$ )
- Major plugin update announcements on the 5th of each month
- Major plugin updates on the 21st, based on the report run on the 5th

I've begun work on a set of wp-cli commands to handle this <https://github.com/cuny-academic-commons/wp-cli-cac>. Currently, it does the major-release tasks. I wrote a bash command to do the minor update task, but I'll convert it to a wp-cli subcommand at some point in the nearish future.

This is pretty much done. I've been using the wp-cli-cac tools for almost a year now, and they've saved me many hours. Woo hoo!
