

CUNY Academic Commons - Bug #3780

wp-login.php template styling

2015-02-02 12:59 AM - Raymond Hoh

Status:	Resolved	Start date:	2015-02-02
Priority name:	Normal	Due date:	
Assignee:	Raymond Hoh	% Done:	0%
Category name:	WordPress (misc)	Estimated time:	0.00 hour
Target version:	1.10		
Description			
Whenever we upgrade WordPress to the latest version, we have to manually reapply a fix so the login template looks alright on the main Commons site.			
What we've been doing in the past is adding a call to <code>get_header()</code> directly in <code>wp-login.php</code> . While this works, the HTML markup is invalid and creates duplicate <code><html></code> and <code><body></code> tags. The login template also does not look right on certain sub-sites. For example, those using the Twenty Twelve theme will notice some irregularities.			
I'd like to try and streamline this a bit by using object buffering and some custom CSS fixes.

Ray,
Is this something you will be able to get to in time for 1.8 or should we punt it down the road?

#2 - 2015-04-21 01:12 PM - Raymond Hoh

- Target version changed from 1.8 to 1.9

Going to move this to 1.9 as the current implementation works.

The method I discuss above will require a bit of dev time and testing.

#3 - 2015-11-09 02:32 PM - Boone Gorges

- Target version changed from 1.9 to 1.10

Moving this out of 1.9. Ray, it's not really user-facing, so if you come up with a fix, feel free to move it into a minor release.

- File 2016-08-23_090754.png added

Fixed in [commit 898420b](#).

To test, go to the new cdev environment and navigate to the login page (commons.gc.cuny.edu/wp-login.php).

Login page should look more integrated into the existing theme.

Here's a screenshot at a narrow width:

Holy mackerel, this is a feat of engineering. Thanks, Ray. Wouldn't it be nice if `wp-login.php` were just a theme-styled page?
