Description Hi, Scheduled posts haven't been posting on murphyinstituteblog.org. This has been going on for a number of months but hasn't really been a problem until now. Is there something that can be done to remedy the situation? Thanks so much! Leah

Well this is extremely embarrassing, but the issue was that I forgot to call "the_post()" on the new query, and was calling it on the main query by accident, which caused an infinite loop. I'm really really sorry about that, but it ought to be fixed here, along with one other typo - <https://github.com/cuny-academic-commons/cac/commit/fbf5111dd42c65ded139915be80b031a4514568e>

Again, it's hard to test because I don't know how to reproduce the error locally, but I did re-confirm that an event is being scheduled, and that there weren't any infinite loops going on.

Remembered to reset the post data after the new loop here:

OK, let's give it a try and see what breaks :-D

Moved to 1.8.x in <https://github.com/cuny-academic-commons/cac/commit/3dadb3e8917c65d679e7db2943a0346872824c21>
