<b>Target version:</b>	1.8.15		

#### Description

cdev is a clone of the production site, with production data that includes production email addresses. We should have protection in place so that email notifications cannot be sent out to these email addresses.

The only safe way I can do this, while still being able to test most email stuff on cdev, is to create a whitelist of email addresses, and kill all outgoing mail that's not headed to one of those addresses. This will make it impossible to run certain sorts of tests (like inviting new members to the site) but it's the best we can do for the time being.

The whitelist will be populated by fetching the email addresses of the members of <http://cdev.gc.cuny.edu/groups/cac-community-team-project-planning/>.
