**Description**

"Recent Posts" on the front page of the Commons is showing a post from January that I recategorized yesterday, but not the two posts that I posted today (both logged in and out, Chrome/Safari/FF).

Also, when I click on Recent posts, I go to [commons.gc.cuny.edu/blogs](https://commons.gc.cuny.edu/blogs) redirects to <https://commons.gc.cuny.edu/groups/cuny-wide-composition-and-rhetoric/forum/topic/blogsbaruch-422-630pm/>. Now I know all paths lead to Blogs@Baruch... but I'm doubtful this is expected behavior.

/groups and /members seems to be working correctly.

The BP Widget Cache plugin was activated on the main Commons site, but not network activated. As a result, invalidation wasn't running properly when publishing a new post, and the widget was serving stale content. This is probably my fault - I've occasionally toggled this plugin, and I probably did it wrong - but I'm copying Ray here in case it was his fault ;)
