Thanks, Scott. Can you please give either a URL or a screenshot, with some details about what you did?

Here is one. I initially added a room - maybe "123" or something.

Then I went back and saw it was empty so I went to edit the topic and entered the room again and saved. But still don't see it.

Gah, this was due to some branch confusion from our GitHub repo - the Room fixes were on the master branch, but not the 1.1.x branch that the Commons runs. I didn't notice this during deployment because the markup that shows the Room field on the Event edit page is custom to the Commons, not to the plugin. This has now been fixed.
