

CUNY Academic Commons - Bug #7022

Sitewide announcements should be displayed on, and dismissable from, mapped domains

2016-12-12 10:44 AM - Boone Gorges

Status:	New	Start date:	2016-12-12
Priority name:	Normal	Due date:	
Assignee:	Boone Gorges	% Done:	0%
Category name:	Announcements	Estimated time:	0.00 hour
Target version:	Future release		
Description			
Currently this can't be done because the AJAX request requires authorization, and cookies aren't sent cross-domain. One of the following things should happen:			
<ul style="list-style-type: none">- Figure out a way to set the CORS headers in such a way that cookies are sent between domains. This should be possible with withCredentials plus some custom Allow-Origin work, but it needs exploration.- Figure out a way to ensure that mapped-domain authentication always sets the commons.gc.cuny.edu auth cookie, so that the native domain cookies can be used. See #1508.- Don't use cookie auth for the AJAX request - could just generate a secret key, or try to implement oAuth2 or something like that.- Have a catcher on the mapped domain (which would use the mapped cookies) and then use PHP to dismiss the notice using switch_to_blog(). This is the easiest, but makes the plugin less appealing for broader use.

- Target version changed from 1.11 to 1.12

We haven't really used sitewide announcements yet, which makes this issue less urgent. Let's not take the time for it now.
