Description

Hi All,

A confusing situation:

- I was trying to troubleshoot something with a CAC user, so I sent her a message through the Commons by visiting the CAC and replying through the CAC messaging interface
- She replied and I received an email notification of her reply
- I replied to her message by hitting "reply" from my email client (Gmail web)
- I received a notification that seemed to indicate that my reply had been posted to the CUNY Digital Humanities Initiative as a forum post
- It looks like my email reply was posted as a comment on a forum thread that I had started this morning -- https://commons.gc.cuny.edu/groups/digital-humanities-initiative/forum/topic/fwd-digital-humanities-at-the-community-college-in-the-us-please-respond-to-our-survey/#post-54970

Hi Matt,

Sorry to hear about this.

Can you take a screenshot of the email headers from the initial email from Marilyn? I want to see the Reply-to email header for that email and compare it to the first two screenshots you took.

#3 - 2017-04-25 11:53 AM - Matt Gold

- File original_msg (10).txt added

thanks, Ray. Please let me know whether this gives you what you need

#4 - 2017-04-25 12:37 PM - Raymond Hoh

Thanks Matt.

I'm still looking into this. Somewhere along the process, the unique querystring used in the Reply-To email header is being hijacked by bbPress, instead of the one associated with private messages.

I'm going to try to duplicate this locally and will report back.

#5 - 2017-04-25 12:40 PM - Matt Gold

Okay -- thanks for your work on this, Ray

#6 - 2017-04-25 02:16 PM - Raymond Hoh

- Status changed from Assigned to Resolved

- Target version set to 1.10.18

Fixed in https://github.com/cuny-academic-commons/cac/commit/d7850af7456cf9e8e7604f8126c80c629488c630

The issue was with the RBE module written for bbPress and the BP Group Email Subscription (GES) plugin, and with the recent auto-connect option written for IMAP mode.

Long story short, the GES RBE code was stamping on other RBE modules. Fix is deployed on production.

Side note: Boone, I'm having problems using git on the production server.

I tried using git fetch origin on production, but got the following:

`error: cannot open .git/FETCH_HEAD: Permission denied`

I had similar troubles when performing git operations in the development directory as well. Is this due to the changes made to the git repo?

#7 - 2017-04-25 02:27 PM - Boone Gorges

Yeah - I manually moved some .git directories around and I neglected to check file permissions. I just made the .git dir group-writable. Can you try again?

#8 - 2017-04-25 02:35 PM - Raymond Hoh

> Can you try again?

That did it. Thanks!
