Description

Ned Benton wants to move two wordpress sites he owns over to the commons. I had thought he would just create new sites and then use the "WordPress Importer" plugin, but I don't see that plugin listed any more. (We'll have to update the Help page.) How is it now done?

The sites are <http://aciajj.org> and <http://mpa.jjconline.net>.

Thanks!

The plugin is not visible on the Plugins page because it's network active. I'm not sure when that happened. But it means that the functionality is automatically available: Dashboard > Tools > Import, and then click 'Run Importer' under 'WordPress'.

Great! He replies:

"I created <https://aciajj.commons.gc.cuny.edu/>. Can I get the Magazine Premium theme added to this site which has already been added to the Slavery site?"

Sounds good. I've enabled the theme for the site. I'll close this ticket, but please feel free to reopen if there are more issues with this same site transfer.
